

RESEARCH ASSOCIATE
DEPARTMENT OF CELLULAR & PHYSIOLOGICAL SCIENCE
THE UNIVERSITY OF BRITISH COLUMBIA

The Department of Cellular & Physiological Sciences invites applications for a Research Associate position in the area of alcohol and neuroendocrinology/neuroimmunology. The successful candidate should have a PhD, at least 2 years of Postdoctoral experience in both basic and clinical research in the alcohol field and in areas of life science including Neurobiology, Neuroimmunology, Neuroendocrinology, Molecular Biology, and Behavior, as well as experience in successful grant writing. The applicant will undertake research utilizing animal models to investigate the effects of alcohol consumption during pregnancy on offspring development, with a particular focus on stress, neuroendocrine function, neuroimmune function, and behavior. In addition, the applicant will take a leading role in clinical studies investigating effects of maternal alcohol consumption on child development from infancy through adulthood, with a focus on health and immune function, as well as cognitive function and adaptive behavior. The applicant is expected to supervise graduate and undergraduate students, play an active role in developing grant applications, and publish actively.

Salary will be commensurate with qualifications and experience. This two-year appointment will be paid from a research grant. Depending upon funding, it may be renewable for additional years.

UBC hires on the basis of merit and is committed to employment equity. We encourage all qualified persons to apply. However, Canadians and permanent residents of Canada will be given priority.

Deadline for receipt of applications is November 17, 2018. Applications, including a curriculum vitae and the names of three references, should be sent to:
