"AlphaB-crystallin and the injured peripheral nervous system"

Thursday, May 16, 2019

12:30 - 1:30 (LSC 3)

Host: Dr. Hakima Moukhles

Towards identifying the molecular factors that regulate Schwann cell function after peripheral nerve injury, we found that alphaB-crystallin, a small heat shock protein expressed by Schwann cells, plays a role in the myelinating ability of these glia in both young and old animals.

Join us for coffee and cookies at Noon in LSC 1416
